2.0 PROJECT INFORMATION

IMPORTANT: If project is multi-jurisdictional in nature, information must be consolidated: completion of this section.

- PROJECT NAME: US 50 Intersection Improvement 2.1
- BRIEF PROJECT DESCRIPTION (Sections A through D): 2.2 A. SPECIFIC LOCATION: US 50 (Wooster Pike) at Mariemont Town Center (Madisonville Road, Crystal Springs and Miami Road)
 - B. PROJECT COMPONENTS: This improvement consists of installing concrete curbs/islands, pavement markings, relocation of signal heads, pedestrian signals, traffic controller replacement, curb replacement, sidewalk replacement to conform to ADA and related work.
 - C. PHYSICAL DIMENSIONS/CHARACTERISTICS: The intersection is approximately 200' x 250'

D. DESIGN SERVICE CAPACITY:

IMPORTANT: Detail shall be included regarding current service capacity vs proposed service level. If road or bridge project, include ADT. If water or wastewater project include current residential rates based on monthly usage of 7,756 gallons p household. The proposed intersection improvement is capable of handling the existing and proposed traffic. The ADT is 21,662.

REQUIRED SUPPORTING DOCUMENTATION 2.3

(Photographs/Additional Description; Capital Improvements Report; Priority Li 5-year Plan; 2-year Maintenance of Effort report, etc.) Also discuss the numb of temporary and/or fulltime jobs which are likely to be created as a result this project. Attach Pages. Refer to accompanying instructions for furth detail.

We anticipate that approximately 6 full time jobs will be necessary to construc

the project over a 30-day period.

3.0 PROJECT FINANCIAL INFORMATION

3.1 PROJECT ESTIMATED COSTS (Round to Negrest Dollar):

5.0 APPLICANT CERTIFICATION

The Applicant Certifies That:

As the official representative of the Applicant, the undersigned certifles that: (1) he/she is legally empowered to represent the applicant in both requesting and accepting financial assistance as provided under Chapter 164 of the Ohio Revised Code and 164-1 of the Ohio Administrative Code; (2) that to the best of his/her knowledge and belief, all representations that are a part of this application are true and correct; (3) that all official documents and commitments of the applicant that are a part of this application have been duly authorized by the governing body of the Applicant; (4) and, should the requested financial assistance be provided, that in the execution of this project, the Applicant will comply with all assurances required by Ohio law, including those involving minority business utilization, Buy Ohio, and prevailing wages.

IMPORTANT: Applicant certifies that physical construction on the project as defined in this application has not begun, and will not begin, until a Project Agreement on this project has been issued by the Ohio Public Works Commission. Action to the contrary is evidence that OPWC funds are not necessary to complete this project.

IMPORTANT: In the event of a project cost underrun, applicant understands that the identified local match share (sections 3.2(a) through 3.2(c) will be paid in full toward completion of this project. Unneeded OPWC funds will be returned to the funding source from which the project was financed.

6.0 DISTRICT COMMITTEE CERTIFICATION

·
The District Integrating Committee for District Number $\frac{2}{}$ Certifies That:
As the official representative of the District Public Works Integrating Committee, the undersigned hereby certifies: that this application for financial assistance as provided under Chapter 164 of the Ohio Revised Code has been duly selected by the appropriate body of the District Public Works Integrating Committee; that the project's selection was based entirely on an objective, District-oriented set of project evaluation criteria and selection methodology that are fully reflective of and in conformance with Ohio Revised Code Sections 164.05, 164.06, and 164.14, and Chapter 164-1 of the Ohio Administrative Code; and that the amount of financial assistance hereby recommended has been prudently derived in consideration of all other financial resources available to the project. As evidence of the District's due consideration of required project evaluation criteria, the results of this project's ratings under such criteria are attached to this application.
William W. Brayshaw, Chairman, District 2 Integrating Committee
Cortifuing Propresentative (Type Name and Title)

December 10, 1992

Subject: US 50 Intersection Improvement

Engineer's Estimate of Useful Life of Issue II OPWC Projects

As required by Chapter 164-1-13 of the Ohio Administrative Code, I hereby certify that the useful life of the subject street improvement project is at least twenty (20) years.

Brian H. Pickering, P.

Village Engineer Village of Mariemont

For furnishing all the materials, labor and equipment and performing all work necessary to complete the rehabilitation of the 1993 State Issue II US 50 Intersection Improvements in accordance with the Plans, Specifications, and as directed by the Engineer.

QUANTITIES

It is understood that the quantities are approximate only and in no way shall govern the amount required during the contract period. The estimated quantities indicated will be used solely for the purpose of making a tabulation of the bids.

Where "LUMP SUM" is indicated, insert the complete price for Labor and Materials for performing all work under the Item. Where "UNITS" are shown, insert the price "PER UNIT" for Labor and for Materials.

Re: Report on U.S. 50 - Town Center Traffic

Dear Brian:

We've completed our evaluation of traffic controls and operations in the Mariemont Town Center and are submitting this report for your consideration. Plate 1 shows the existing conditions in this area.

While the Mariemont Town Center is treated as a single complex, from a legal point of view it is really four distinct intersections on a divided highway (Wooster Pike, US 50). The reason for this lies in the Ohio Revised Code, specifically section 4511.01 (KK) which establishes 30 feet as the maximum distance between roadways before they must be considered as separate intersections. Consequently, each of these four intersections must be treated independently and completely controlled for safety as well as from the viewpoint of liability.

One of these intersections, that of eastbound Wooster Pike and Miami Road, lacks traffic controls governing the southbound movement. Northbound traffic on Miami has a stop sign and eastbound traffic on Wooster Pike has signal indications but there is nothing to inform southbound motorists about their rights or responsibilities. Since the vast majority of people driving through this intersection are familiar with the situation, and since there is a delay between the termination of the southbound Madisonville Road signal phase and the eastbound Wooster Pike phase, the Village has apparently managed to avoid serious accident problems and/or lawsuits arising from them. However, the potential for a stranger not familiar with the area proceeding south through this intersection and being involved in a right-angle collision with eastbound traffic on Wooster Pike is high and consequently the liability exposure of the Village is high. Therefore, our first recommendation [1] is that southbound indications be provided at this intersection. Plate 4 shows this recommendation.

This intersection is essentially signal controlled but the south (Miami Road) leg is stop sign controlled. While this approach carries a relatively small amount of traffic, approximately 400 per day in contrast to the 8890 per day on eastbound Wooster Pike, it nonetheless is a street and not an alley or driveway. The fact that it is a mandatory right turn control reduces the number of conflicts in this situation. Emphasizing the right turn channelization

Other Offices:

by extending the present painted island would significantly improve this situation so that it could continue to operate safely without signalization.[2]

Relative to the same intersection, there is a need for another pedestrian indication on the north side of the crosswalk facing the existing indication at the south end.[3] The existing indication on the north side of westbound Wooster Pike, near the Mariemont Inn, does not satisfy this need since it is in a separate intersection. Even if it were, a pedestrian clearance interval of 29 seconds in length would be necessary for it to function correctly.

Similarly, looking at the intersection of Madisonville Road and westbound Wooster Pike, an additional pedestrian indication is needed on the south end of that crosswalk [4] to work in concert with the existing one near the Mariemont Inn. It was also noted that the existing indication lacks any pedestrian clearance interval between the end of the walk interval and the beginning of the westbound green interval for traffic on Wooster Pike.

This leads into the matter of the traffic control at the intersection. There are a number of operational deficiencies that represent safety as well as liability concerns. The lack of pedestrian clearance cited above is one. A second concerns the crosswalk on the east side of Madisonville Road across Wooster Pike. This crosswalk provides only 6 seconds of walk which is rather short. This in itself is not a safety or liability problem. However, after only 4 seconds of "DONT WALK", the westbound right turn arrow is displayed which creates a direct conflict between pedestrians and those vehicles. The length of the crosswalk is 64 feet and the 4 seconds of clearance at a walking speed of 4 feet per second do not allow pedestrians to clear that crosswalk before traffic is moving across it. Phasing and timing need to be modified to eliminate this conflict.[5]

At westbound Wooster Pike and North Miami Road, another conflict exists with both northbound left-turn vehicles and southbound right-turn vehicles being displayed arrows simultaneously, giving each of them the right-of-way to enter the same space at the same time. There are also some unnecessary delays in the timing of this intersection which, while not presenting liability problems, represent inefficiencies apparently caused by utilization of the existing controller which is unable to properly operate the intersection.

This leads to the next recommendation, namely that the existing controller be replaced [6] by a new multi-phased unit capable of accommodating in a safe manner all of the vehicular and pedestrian movements which are occurring in the complex. For example, the last mentioned conflict could be eliminated by separating the northbound left turn from the through and providing a separate phase for a lead northbound left before allowing the southbound through to move concurrently with the northbound through.[7] Similarly, some of the other conflicts cited above could also be eliminated by means of a controller that has the additional capabilities or capacity required to perform all of the functions that are really needed. In effect, one controller is currently trying to operate three intersections and it is not possible to do so with the existing piece of equipment.

The controller now housed in the center of the square was a fine piece of equipment in its

day. However, it is not technically able to do all that is required of it. Furthermore, being electrical-mechanical, it consists of many parts that are physically wearing out and can no longer be readily replaced because of the obsolescence of the equipment. Traffic control equipment entered the solid-state era approximately two decades ago and the old electrical-mechanical equipment is rapidly disappearing, thus making it very difficult to continuing maintaining that equipment which is still operating.

Even if it were possible to continue maintaining the present controller, it does not have the functional capability to provide all of the phases, timing patterns and intervals that are needed to operate three signalized intersections. The new solid-state signal control systems have a considerable amount of capacity built into them which allows them to address complex situations such as this. Therefore, the recommendation is to replace the existing control equipment because of the increasing difficulty of maintaining this old equipment as well as the need from the viewpoint of safety and operations to implement a number of timing and phasing changes.

Returning to signal indications, two enclosed drawings (Plates 3 and 4) have been prepared to show the existing locations of signal heads relative to the cones of vision that are supposed to control these locations. The Ohio Manual of Uniform Traffic Control Devices states that "Except where the width of the intersecting street or other conditions make it physically impractical, at least one and preferably both of the signal faces required by paragraph (a) above shall be located not less than 40 feet nor more than 150 feet beyond the Stop Line. Where both of the signal faces required by paragraph (a) above are post-mounted, they shall both be on the far side of the intersection, one on the right and one on the left of the driver. The signal face(s) required by paragraph (c) above shall conform to the same location requirements as the signal faces required by paragraph (a) to the extent practical."

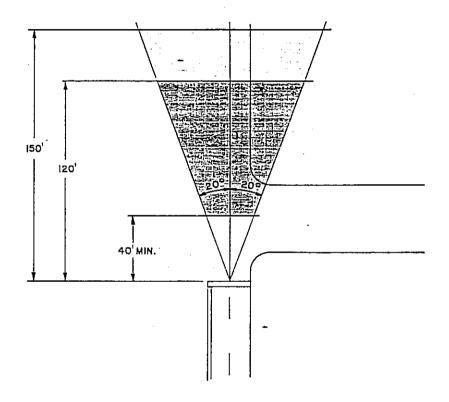

Continuing from the Ohio Manual, "Except where the width of the intersecting street or other conditions make it physically impractical, at least one and preferably both of the signal faces required by paragraph (a) above shall be located between two lines intersecting with the center of the approach lanes at the Stop Line, one making an angle of approximately 20 degrees to the right of the center of the approach extended, and the other making an angle of approximately 20 degrees to the left of the center of the approach extended (see Figure TS-6). This requirement is to be applied simultaneously with paragraph (d) above."

Figure TS-6 from the Ohio Manual of Uniform Traffic follows this page.

You'll note that for southbound Madisonville Road traffic both existing indications are in the cone of vision as vehicles approach the intersection but as they begin to turn at the stop bar, only one barely remains within the cone. It would be desirable to extend one or both of these through the use of a longer mast arm at this location.[8]

The indications for westbound Wooster Pike traffic at this location do fit within the cone of vision.

DESIRABLE LOCATION OF SIGNAL FACES

NOTES:

- I. WHERE THE NEAREST SIGNAL FACE IS MORE THAN 120 FEET AND LESS THAN 150 FEET BEYOND THE STOP LINE, EITHER 12-INCH SIGNAL INDICATIONS OR A SUPPLEMENTAL NEAR-SIDE SIGNAL FACE SHALL BE USED.
- 2. WHERE THE NEAREST SIGNAL FACE IS 150 FEET OR MORE BEYOND THE STOP LINE, A SUPPLEMENTAL NEAR-SIDE SIGNAL FACE SHALL BE USED.

REF. SEC.

6B-12

(Rev. 13)

The indications for eastbound Wooster Pike at Miami Road also fit within the cone of vision. However, you'll note that the indications for northbound traffic at westbound Wooster Pike do not fall into the cone of vision as they should. Traffic intending to go northeastwardly on North Miami Avenue does not have either indication within its cone of vision. Traffic turning left to go westbound on Wooster Pike has only one. It is recommended that these locations be addressed, perhaps through the use of new mast arm equipment and optically programmed heads.[9] In the process, it might be possible to eliminate the duplicate poles in front of Graeter's and replace them with one new mast arm with an extension for the street lighting bracket which is on the other pole.

Finally, the existing indications for North Miami Road traffic at westbound Wooster Pike and for westbound Wooster Pike traffic at North Miami Road fit within the cones of vision.

The issue of audible pedestrian signals has been raised. At the present time, there is no accepted standard for the use or even the design of audible pedestrian signals. There are strong positions on both sides of the subject. The City of Cincinnati and some other agencies do employ some. Attention to the subject will undoubtedly increase with the implementation of the Americans with Disabilities Act. Audible devices can be incorporated in an upgrade if the Village chooses to use them. The ability to add them in the future can also be incorporated in new equipment as it is designed and acquired. The ability to limit audible devices to use only when required by blind people is also possible. At the present time, it is our feeling that the decision to employ or not employ audible devices is a policy one to be made by the Village. It should be based upon demonstrated need with the understanding that users of the devices would need to be trained in their operation. Normally communities that have either employed or at least considered audible devices work with institutions or schools within the community. Experience has shown that some institutions and schools for the blind are opposed to them. Therefore, it is our recommendation that the Village approach any institution, school or organization that may have an interest in this, discuss it with them and then formulate its own policy decision. The technical aspects can be designed as part of Phase II if the Village decides to proceed with audible devices.

Circulation through the area is rather confusing due to the intricate weaving of several different traffic patterns in the relatively compact area. Improved lane use controls are recommended. While often these are accomplished by overhead lane use signs, recognizing the Village's standards for appearance, we would recommend instead some side mounted lane use signs and an increase in pavement arrows and words "ONLY".[10]

Along this same line, circulation could be considerably clarified and esthetics would be significantly improved if much of the painted island area was replaced by physical islands containing grass, flowers and plantings. The Village may want to consider the overall benefits of turning painted areas into expanded green areas. A separate sheet (Plate 5) has been enclosed to show conceptually some of these possibilities. Physical islands could also better screen the parking areas from the travel areas, improving not only the traffic flow and circulation but also enclosing the spaces somewhat within the more attractive green space

which would make them less obtrusive in the Town Center. They would also provide "touch-down" locations for crosswalks, thus clarifying the somewhat confusing pedestrian crossing patterns. Plate 5 shows these conceptually but does not attempt to design them. If the Village decides to proceed with this concept, it would be necessary to design the islands to provide space and turning radii for the cars, trucks and buses using the area.

Also relative to the parking areas, right-of-way and turn controls are recommended for clarification and safety.[11]

The crosswalk over westbound Wooster Pike on the east side of Madisonville Road is the only marked one connecting the square with all of its parking to the north side of Wooster Pike. There are no marked crosswalks connecting the square to the south side of Wooster Pike. State law does provide that crosswalks exist at all intersections, being the prolongation of sidewalk areas on the various legs, unless they are specifically prohibited by traffic control devices. Therefore, while the specific locations of these unmarked crosswalks are difficult to determine because of the layout of the Town Center area, they do in fact exist. As a matter of practice, pedestrians tend to cross to and from the Town square by following the shortest path between their parking and their destinations on the other side of the street. If a pedestrian were crossing in an area that constituted a legal, albeit unmarked, crosswalk and were struck by a vehicle, the accident could result in a difficult legal situation. As a matter of fact, even if the pedestrian were not in an area constituting an unmarked crosswalk and were struck, she/he might also raise the issue of the difficulty of crossing Wooster Pike in the absence of marked crosswalks. Rather than make specific recommendations on traffic controls, it is our recommendation that the Village consider the entire matter of pedestrian circulation in this area to include not only the markings, signs and other traffic control devices but also the matter of pedestrian discipline and enforcement as well as those issues of safety and liability. We would be pleased to meet with you and any other Village officials to discuss this sometime. Such a meeting would be more productive than an attempt to spell out in detail all of these aspects in this report or in the accompanying plates.

Passage of the Americans with Disabilities Act of 1990 and its implementation earlier this year has increased the requirements for the utilization as well as placement and design of curb ramps. As part of any upgrading of the Town Center, all crosswalks and their termini should be reviewed against the new ADA curb ramp provisions to insure that the pedestrian circulation system is in compliance with the requirements.

The five enclosed drawings illustrate these recommendations. Plate 1 is simply a drawing showing the existing conditions. Plates 2 and 3 show the existing cones of vision for the signal heads as they are today. On those, we have shown the recommendations for new or relocated signal heads in order to place them within the cones of vision.

Plate 4 illustrates the various recommendations made in this report, including the signal head provisions which are also shown on the "cone of vision" drawings. And finally, Plate 5 shows conceptually the considerations for expanding the green area by replacing painted islands with either extensions of existing physical islands or new ones.

One final recommendation is that the underground wiring throughout the Town Center be thoroughly checked in Phase II by the Village's electrical/traffic signal contractor to determine the location, use and condition of it. This is needed for maintenance of the existing installation as well as any modifications that would be made.

If you have questions or would like to discuss the recommendations contained in this report, please don't hesitate to call.

ADDITIONAL SUPPORT INFORMATION

For Fiscal Year 1994 (July 1, 1993 through June 30, 1994), jurisdictions shall provide the following support information to help determine which projects will be funded. Information on this form must be accurate, and where called for, based on sound engineering principles. Documentation to substantiate the individual items may be required by the Support Staff if information does not appear to be accurate.

ind:	ividual items may be requipormation does not appear to be	red by the Support Staff if accurate.
1)	What is the condition of the be replaced, repaired, or exta copy of the current State:	panded? For bridges, submit
	Closed	Poor X
-	Fair X	Good
pres suri subs sigh	sent facility such as: inade face type and width; number of standard design elements such	ature of the deficiency of the equate load capacity (bridge); of lanes; structural condition; as berm width, grades, curves, ctures, or inadequate service eximate age of the infrastructure nded.
	The existing intersection and US 50	was overlayed by ODOT in 1989, however,
tra		encies creating safety problems. See tional information.
2)	contract? The Support Staff	roject Agreement from OPWC 1993) would the project be under will be reviewing status reports udge the accuracy of a particular
	weeks months (Ci	rcle one)
	Are preliminary plans or engi	neering completed? Yes No
	Are detailed construction pla	ns completed? Yes No
	Are all right-of-way and easen	ments acquired? Yes No N/A
	Are all utility coordinations	completed? Yes No N/A
	Give an estimate of time, in	weeks or months, to complete any

item above not yet completed. ______ weeks months

	Will the	ban be	removed	after t	he project	is complet	ed?	
	Yes	N	o					

6)	What is the total number of existing users that will benefit as a result of the proposed project?
	21,662 x 1.2= 25,994
	For roads and bridges, multiply current <u>documented</u> Average Daily Traffic by 1.20. For public transit, submit documentation substantiating the count. Where the facility currently has any restrictions or is partially closed, use documented traffic counts prior to the restriction. For storm sewers, sanitary sewers, water lines, and other related facilities, multiply the number of households in the service area by 4.
⁻ 7)	Has the jurisdiction developed a Five Year Capital Improvement Plan as required in O.R.C., chapter 164? (This must be included with the application to be considered for funding.)
	Yes <u>y</u> No <u> </u>
8)	Give a brief statement concerning the regional significance of the infrastructure to be replaced, repaired, or expanded.
	The intersection is on a state route (US 50) serving jurisdictions on
	the east side of Hamilton County.

STATE ISSUE 2 PROGRAM - ROUND 6

LTIP PROGRAM - ROUND 5

FISCAL YEAR 1994 PROJECT SELECTION CRITERIA - JULY 1, 1993 TO JUNE 30, 1994

ADOPTED BY THE DISTRICT 2 INTEGRATING COMMITTEE JULY 17, 1992

AMENDED BY THE DISTRICT 2 INTEGRATING COMMITTEE SEPTEMBER 18, 1992

JURISDICTION	N/AGENCY: MARLEMONT
NAME OF PROS	JECT: US SU
TOTAL POINTS	FOR THIS PROJECT:
NO. <u>POINTS</u>	
<u>/0</u> 1)	If Issue 2/LTIP Funds are granted, when would the construction contract be awarded? (The Support Staff will assign points based on engineering experience.)
	10 Points - Will be under contract by end of 1993
	5 Points - Will be under contract by March 30, 1994
	O Points - Will not be under contract by March 30, 1994
<u>O</u> 2)	What is the condition of the infrastructure to be replaced or repaired? For bridges, base condition on latest general appraisal and condition rating.
	20 Points - Poor Condition 16 Points -
	12 Points - Fair to Poor Condition 8 Points -
	4 Points - Fair Condition

NOTE: If the infrastructure is in "good" or better condition it will NOT be considered for Issue 2/LTIP funding, unless it is a betterment project that will improve serviceability.

- 10 Points Significant effect (e.g., widen to and add lanes along entire project)
 - 8 Points Moderate to significant effect
 - 6 Points Moderate effect (e.g., widen exist. lanes)
 - 4 Points Moderate to little effect

- 4) How important is the project to HEALTH, SAFETY, AND WELFARE of the public and the citizens of the District and/or service area?
 - 10 Points Highly significant importance, with substantial impact on all 3 factors
 - 8 Points Considerably significant importance, with substantial impact on 2 factors OR noticeable impact on all 3 factors
 - 6 Points Moderate importance, with substantial impact on 1 factor or noticeable impact on 2 factors
 - 4 Points Minimal importance, with noticeable impact on 1 factor
 - 2 Points No measurable impact
- - 10 Points Poor
 - 8 Points -
 - 6 Points Fair
 - 4 Points -
 - 2 Points Excellent
- - 5 Points 50% or more
 - 4 Points 40% to 49.99%
 - 3 Points 30% to 39.99%
 - 2 Points 20% to 29.99%
 - 1 Point 10% to 19.99%

- Has any formal action by a federal, state, or local 7) government agency resulted in a partial or complete ban of the usage or expansion of the usage for the involved infrastructure? POINTS MAY ONLY BE AWARDED IF THE END RESULT OF THE PROJECT WILL CAUSE THE BAN TO BE LIFTED.
 - 5 Points Complete or significant ban
 - 3 Points Partial or moderate ban
 - O Points No ban of any kind
 - 8) What is the total number of existing daily users that will benefit as a result of the proposed project? Appropriate criteria include current traffic counts, households served, when converted to a measurement of persons. Public transit users are permitted to be counted for roads and bridges, but only when certifiable ridership figures are provided.
 - 5 Points 10,000 or more

 - 4 Points 7,500 to 9,999 3 Points 5,000 to 7,499
 - 2 Points 2,500 to 4,999
 - 1 Point 2,499 and under
 - 9) Does the infrastructure have REGIONAL impact? Consider origins and destinations of traffic, functional classification, size of service area, number of jurisdictions served, etc.
 - 5 Points Major impact (e.g., major multi-jurisdictional route, primary feed route to an Interstate, Federal - Aid Primary routes)
 - 4 Points -
 - 3 Points Moderate impact (e.g., principal thoroughfares, Federal - Aid Urban routes)
 - 2 Points -
 - 1 Point Minimal or no impact (e.g., cul-de-sacs, subdivision streets)
- 10) Has the jurisdiction enacted the optional \$5 license plate fee, an infrastructure levy, a user fee, or a dedicated tax for infrastructure?
 - 2 Points Two of the above
 - 1 Point One of the above
 - O Points None of the above

ADDENDUM TO THE RATING SYSTEM DEFINITIONS

CRITERION 2 - CONDITION

Poor - Condition is dangerous, unsafe or unusable

Fair to Poor - Condition is inadequate or substandard

Fair - Condition is average, not good or poor

CRITERION 5 - ECONOMIC HEALTH

The following factors are used to determine economic health:

- 1) Median per capita income
- 2) Per capita assessed valuation of the total community real estate and personal property
- 3) Poverty indicators
- 4) Effective tax rates
- 5) Total corporate debt as a percentage of assessed valuation
- 6) Municipal revenues and expenditures per capita

CRITERION 9 - REGIONAL IMPACT

Major impact - Primary water or sewer main serving an entire system

Moderate impact - Waterline or storm sewer serving only part of a system

Minimal impact - Individual waterline or storm sewer not part of a system
